

Platinum Sponsor @ SSA 2021

Security Risk is established in Singapore in 2017, in this short space of time, we have developed an affordable suite of web and mobile-based apps, Security Risk Manager (SRM), that turns how physical security operations are carried out, on its head. Building on our early successes, we have to include offices in Australia and the United Kingdom. By combining our robust, rapid response technology with on-the-ground local intelligence, Security Risk clients can ensure that the safety of their personnel and the integrity of the premises are protected. SRM Platform also assists in compliance with local laws without the need for expensive or hard-to-operate systems

Our team is always looking for ways to develop and innovate our platform. Our goal is to provide security companies and corporate security teams with a highly efficient solution to the management of their security operations, as well as an alternative to both the traditional paper-based management system.

Most businesses don't require a heavily customised security operations system with the price tag to match. Security Risk is here to fill that gap and help keep your people safe.
